

New Feature: Batch File Uploading

Available now is the latest feature of Bill4Time as your time and project management software. Users can now upload multiple files at once for their clients and projects. As always, the system update is free for all users.

Files uploaded together are grouped but when you need to access any of them, just click on the individual link to download it. It's never been easier to make the Internet your hard drive. Now with the new Batch File Uploading feature, you can save time uploading your relevant documents.
